

# Model aSENSE ™ - VAV

# carbon dioxide, temperature and humidity controller for wall and duct mounting

# PRODUCT DESCRIPTION

aSENSE<sup>™</sup> - VAV is a stand alone controller with built-in sensors for temperature, humidity and carbon dioxide. The unit measures both CO₂ concentration and temperature in ambient air, transforms the data into analogue and digital output signals, which are used for controlling air supply on demand.

Additional cooling compressor for dehumidification may also be controlled.

aSENSE<sup>™</sup> - VAV is for installation in the climate zone or in a ventilation duct.

## **FEATURES**

- Cost-optimized for direct linear control of dampers and speed regulated fans
- Alternative control outputs
- Contributes to lower energy costs when applied in Demand Controlled Ventilation
- Internal automatic self diagnostics
- Maintenance-free
- Available with different measurement ranges and several housing options
- Serial communication port for connection to a PC or a GSM module and local network

# **APPLICATIONS**

A common application for aSENSE<sup>TM</sup>- VAV is controlling ventilation in rooms occupied by people. The sensor is flexible and designed to suit many different ventilation strategies. It is a key component for energy-effective, healthy climate control of rooms with varying load like schools / nurseries, cinemas / theatres, sports centers etc.

*In museums* and *libraries* etc, the ventilation control based on temperature and carbon dioxide measurements can be combined with control of humidity.

To avoid *condensation problems* it is often necessary to measure humidity in air conditioning and in other cooling applications. With aSENSE<sup>TM</sup>-VAV-RH all parameters can be measured and controlled from the same unit. This sensor is a basic component to be used in a lot of different ventilation applications, as well as in industrial / agriculture process controls.

# aSENSE <sup>™</sup>- VAV controller Technical Specification\*

#### **General Performance**

Operating Temperature Range ................................. 0 - 50 °C (Lower temperature operation range can be reached by adding a box heater assembly)

Storage Temperature Range .....-20 to +70 °C

Operating Humidity Range ...... 0 to 95% RH (non-condensing)

Warm-up Time ......≤ 1 min. (@ full specs ≤ 10 minutes)

Sensor Life Expectancy ...... > 15 years

Maintenance Interval ......no maintenance required <sup>1,2</sup>

Self Diagnostics ...... complete function check of the sensor

Status LED Indicators ......yellow = maintenance support, red = relay closed 

...... offer a selection of installation support, calibration and operation functions

#### Electrical/Mechanical

Power Input ......24 VAC/VDC±20%, 50-60 Hz ≤ 3 Watts average

Wiring Connections ...... max 1,5 mm<sup>2</sup> wires Main terminal block ......screw terminals Digital/Analog inputs block ......spring load terminals

UART connector ......5-pin, 2.54 mm pitch, slide connector

Dimensions without housing .................................. 9.7 x 6.1 x 1.9 cm (L x W x D)

#### Output

Analogue 4

Protection .......PTC fuse (auto reset) on signal return M, short-circuit safe Output limits .......MIN & MAX limits may be individually set to all outputs

0/2-10 VDC (0/1-5 VDC optional 0/4-20 mA Rload < 500 OHM

D/A Conversion Accuracy ......voltage mode: ± 2% of reading ± 50 mV,current loop: ± 2% of reading ± 0.3 mA

Relay (OUT3) ......isolated N.O., 1mA/5V up to 1A/50VAC/24VDC.

Open collector OUT4 ......in ON/OFF mode: max 0.5A/55VDC (halfwave rectifier for AC)

#### **UART** Serial com port

LonWorks<sup>™</sup> network com...... (accessory -LON) LonWorks<sup>™</sup> add-on PCB

RS485 network com. ......(accessory -485) RS485 terminal slide-on port Option Modbus RTU

#### Inputs

### CO<sub>2</sub> Measurement

Operating Principle .......Non-dispersive infrared (NDIR) with Automatic Baseline Correction (ABC) 8

Gas Sampling Mode ...... diffusion

..... ± 1% of measurement range ± 5 % of measured value

Pressure Dependence ...... + 1.58 % reading per kPa deviation from normal pressure, 100 kPa

Annual Zero Drift 8 .....< ±0.3 % of measurement range

Measurement ranges ...... different sensor models from 0 - 3 000 ppm (standard) to 0 - 10 9vol.

# Temperature Measurement

Operating Principle ...... Thermistor

Measurement Range .....-20 to +60 °C

Accuracy ......± 0.5 °C; Digital Resolution 0.1 °C (0.01 °C via UART)

# Relative Humidity Measurement (model options -RH)

Operating Principle ...... capacitive polymer in a monolitic IC Measurement Range <sup>10</sup> ..... 0 to 100 % RH Accuracy ..... ± 2 % RH

Note 1: In normal IAQ applications. Some industrial applications may require an annual zero gas purge, which automatically recalibrates the CO2 sensor

Note 2: For -RH models, in applications with elevated temperatures and high humidity levels the relative humidity probe calibration may have to be maintained

Note 3: Different menus exist for different models. Push-buttons are available only in models having a LCD.

Note 4: The specifications are valid for the output load connected to ground G0 or common signal return

Note 6: Free download from: www.senseair.com

Note 7: For more information, please contact SenseAir AB

Note 8: The ABC function is the key for maintenance free operation. It assumes normal IAQ environments or applications where some ventilation will occure (at least during *some* moment over a week period). For CO<sub>2</sub> sensors this function automatically corrects for any possible *zero* drift. Note 9: In normal indoor air environment. Accuracy is defined at continuous operation (3 weeks minimum after installation)

Note 10: Extended exposure to > 90 % RH causes reversible shift of 3 %.
